Subject: RE: 8MM OD Tubing

Hi Avi and Greg,

After speaking with the microbiologists, we have actually decided that it is best to just “catch” the water into a container like we have been doing (vs. using the tubing). The valve therefore is not necessary, unless there is concern about water being spilled inside the unit (which I don’t believe is the case). So let’s just leave it the way it is for now.

Thanks,

Michael

Subject: 8MM OD Tubing

Hi Avi,

We have a coil of autoclavable 8mm OD tubing for collecting samples at the finish filter quick connect port. It would be easier to install a valve with an 8mm quick connect port on the downstream side. As it is now, water runs on the AWG floor when we pull the plug. Can you get a valve to connect to the tubing fitting or a threaded valve that would screw into the base of the filter? That would be great. Most of our fittings are English and not metric.

See attached photos for reference.
